

## SCIENTIFIC AND METHOD MODULES

<b>Module name</b>	<b>Multifunctional scaffolds</b>
<b>Number</b>	2008-M10
<b>Aims</b>	The module aims at providing the scientific background required to study and manipulate biopolymers, biopolymer networks, proteins and protein networks, including the highly dynamic polymer scaffolds in living tissues as an organizing matrix for smart nanoelements, molecular motors, mechano-sensing, force-generation, motile polymeric machines, etc.
<b>Basics</b>	The topics covered in biophysics lectures from existing master courses; polymer physics, liquid crystal physics, properties and isolation of biopolymers (DNA, actin, intermediate filaments, microtubule), viscoelasticity, basic statistical physics and thermodynamics of polymers
<b>Contents</b>	The module introduces the participants to physical, chemical and biological perspectives onto various multifunctional scaffolds as well as to modern experimental techniques. Topics comprise general soft matter background, statistical physics and MC simulation approaches, protein folding assembly and aggregation, the complex interactions in aqueous media, biopolymers and biopolymer networks, molecular motors, artificial nanomotors, structure and mechanics of the cytoskeleton, cell-cell interactions via artificial extracellular scaffolds
<b>Methods</b>	Single molecule imaging, optical tweezers, scanning atomic force microscopy digital polarization microscopy, confocal/multiphoton microscopy, dielectric spectroscopy, single particle tracking, soft lithography and microfluidics, biochemistry, recombinant DNA. Theory: statistical mechanics, thermodynamics, MC simulations
<b>Type</b>	Two-day block course/ yearly recurrence with modification
<b>Date (month/year)</b>	23./24. September 2008
<b>Time</b>	9.00 – 18.00
<b>Work load</b>	15 hours presence/ 45 hours self-study
<b>Examination</b>	Oral
<b>Credit points</b>	2
<b>Responsible scientists</b>	Käs, Kremer, Kroy
<b>International guest lecturers</b>	X. Trepat (Harvard School of Public Health, Boston), P. Fernandez, T. Hugel (TU Munich) N.N. (Inst.-Marie-Curie, Paris)
<b>Industrial partners</b>	<b>Beiersdorf, Novocontrol</b>

Time	Lecturer	Programme	Location
<b>Tuesday 23 September 2008</b>			
9:00	F. Kremer, K. Kroy	Opening	SR 221
9:15-10:00	K. Kroy (Leipzig)	What can colloids and polymers teach us about proteins?	SR 221
10:00-10:45	C. Friedrich (Freiburg)	Thermorheological properties of fibre networks <i>Coffee break</i>	SR 221
11:15-12:00	S. Egelhaaf (Düsseldorf)	Concentrated Colloidal Suspensions in Shear and Light Fields <i>Lunch break</i>	Theoretischer HS
14:00-14:45	F. Kremer (Leipzig)	Optical tweezers to study the interaction between soft and solid surfaces	Theoretischer HS
14:45-15:30	M. Salomo (Leipzig)	Optical tweezers to study receptor/ ligand interactions on a single contact level <i>Coffee break</i>	SR 221
16:15-17:00	W. Richtering (Aachen)	Probing colloidal systems with 2 focus Fluorescence Correlation Spectroscopy	Theoretischer HS
<b>Wednesday, 24. September 2008</b>			
09:00-09:45	W. Goedel (Chemnitz)	Combining particle assisted wetting and breath figure patterns to create hierarchical structures	Theoretischer HS
09:45-10:30	R. Vincent (Paris)	Mechanics of the pectin scaffolds of plant cells <i>Coffee break</i>	SR 221
11:00-11:45	T. Hugel (Munich)	From biological towards artificial molecular motors	SR 221
11:45-12:30	P. Marcq (Paris)	Active gels <i>Lunch break</i>	SR 221
14:00-14:45	X. Trepot (Boston)	Universality in cell mechanics and the cytoskeleton	SR 221
14:45-15:30	P. Fernandez (Munich)	Cooperative effects in mechano-sensing <i>Coffee break</i>	SR 221
ab 16:00	Lab course (M. Salomo)	Optical tweezers lab	131

#### Didactic elements:

Lecture, discussions, practical training – lab demonstration, etc.

#### Expected performance:

Active participation in discussions and during lab demonstration (selected work stations), etc.
